PROGRESS UPDATE / 9 NOVEMBER 2026

SaccoFleet project progress

Since the 24 October presentation, I updated the account screens, improved the fleet dashboard, and added service records and CSV downloads.

01 Account access

I redesigned the login page and added self-service sign-up, a stay-signed-in option, and local password reset.

What I tested

In Chrome, I created a test account, signed out, and signed back in to the dashboard.

View changes since the 24 October presentation

FLEET OPERATIONS

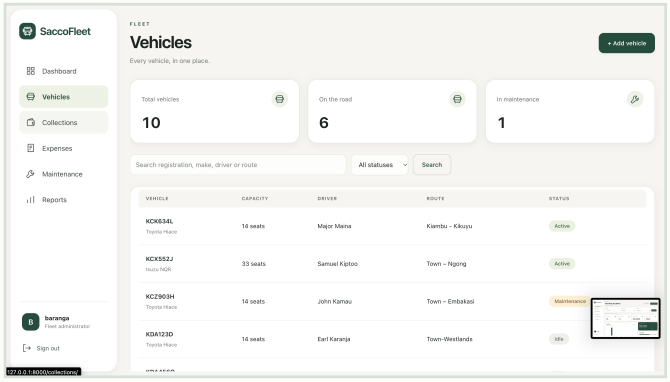

Dashboard and fleet

I updated the layout across the fleet screens and added new ways to check performance and track servicing.

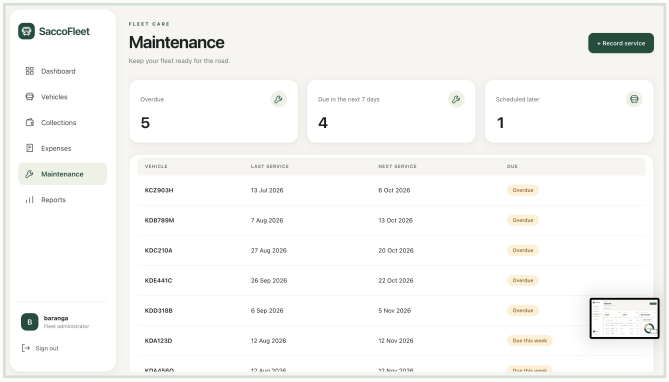

02 Dashboard

I added date filters for collections, expenses, net profit, and the cash flow chart.

03 Vehicles

I refreshed the vehicle list and added financial history to each vehicle’s details.

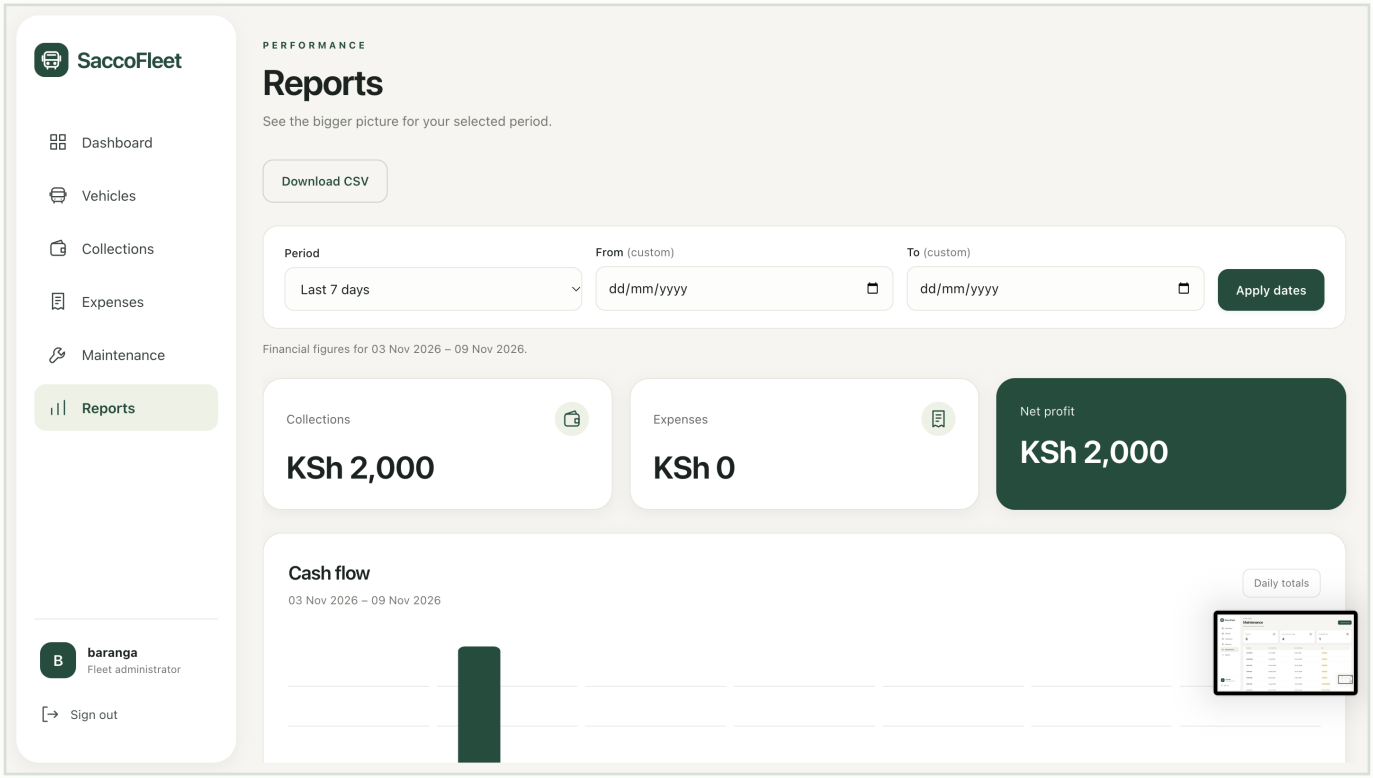

04 Maintenance

I added service records with costs and notes, linked to repair expenses.

FINANCE AND REPORTING

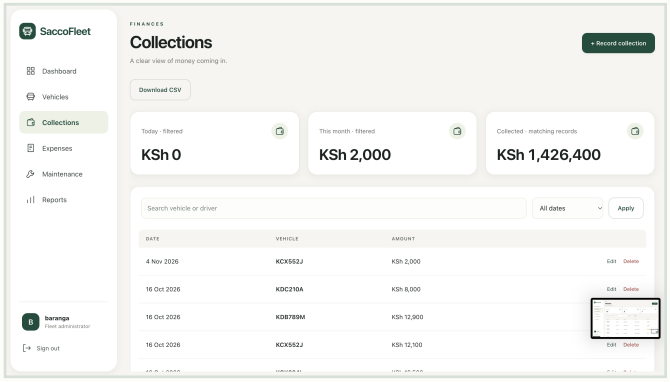

Collections and expenses

I added CSV downloads for filtered records so I can review them in a spreadsheet.

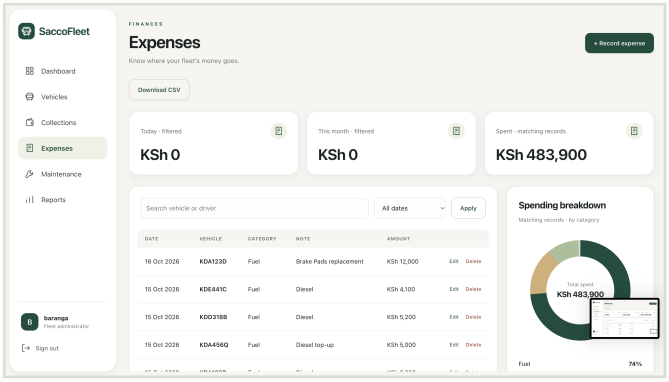

05 Reports

Reports now use the same date filters as the dashboard and can export the selected period.

06 Collections

The CSV includes records matching the search and date filters.

07 Expenses

I added a spending breakdown by category and CSV export for matching expenses.
